Sectoral
Activities
Department

Sectoral activities in the ILO

The Sectoral Activities Programme is managed by the Sectoral Activities Department (SECTOR) in the Social Dialogue Sector of the ILO. Its objective is to promote social dialogue at the sectoral level and to facilitate the exchange of information among the ILO's constituents on labour and social developments concerning particular economic and social sectors. One of its means of action is practically oriented research on topical sectoral issues. This publication is an outcome of that research.

The particular characteristics of the various primary, manufacturing and service sectors account for the different form taken in them by issues such as globalization, flexible work organization, industrial relations, the implications of structural and technological change, trends in the number and nature of jobs, and the situation of special groups such as children and women workers. The Sectoral Activities Programme constitutes the principal ILO interface with its constituents at the sectoral level.

Continuing attention is given to eight groupings of major primary, industrial and service sectors: Agriculture and forestry; Education and research; Energy and mining; Infrastructure, construction and related industries; Manufacturing; Private sector services; Public services and utilities; and Transport.

The groupings include the following sectors: Agriculture, plantations, other rural sectors; Basic metal production; Chemical industries; Commerce; Construction; Education; Financial services, professional services; Food, drink, tobacco; Forestry, wood, pulp and paper; Health services; Hotels, tourism, catering; Mechanical and electrical engineering; Media, culture, graphical; Mining (coal, other mining); Oil and gas production, oil refining; Postal and telecommunications services; Public service; Shipping, ports, fisheries, inland waterways; Textiles, clothing, leather, footwear; Transport (including civil aviation, railways, road transport); Transport equipment manufacturing; Utilities (water, gas, electricity). These sectors are vital in virtually all national economies. Issues concerning other sectors or subsectors within groupings are addressed on an ad hoc basis.

The principal activities of the Sectoral Activities Programme are a mix of the development and undertaking of constituent-driven practical action programmes in various sectors in a number of countries, and the holding of international sectoral meetings that provide a forum for discussion and an exchange of views on current issues in the sector concerned. These activities are generally tripartite, with equal participation by governments, employers and workers. Where the government is the predominant employer, however, participation reflects this. From time to time, specialized meetings of experts are held. An outcome of most meetings is agreed conclusions that serve as guidelines for policies and measures for dealing with the issues and problems – at the national level and by the ILO.

The Programme undertakes follow-up activities to these meetings and provides various forms of technical assistance, including the promotion of tripartite sectoral dialogue on priority labour issues at national level, and the provision of advisory services on sectoral labour issues. It also collects, analyses and disseminates technical sectoral information and carries out studies, such as this one, on issues of concern to particular sectors or groups of sectors.

ILO Cataloguing in Publication Data

The designations employed in ILO publications, which are in conformity with United Nations practice, and the presentation of material therein do not imply the expression of any opinion whatsoever on the part of the International Labour Office concerning the legal status of any country, area or territory or of its authorities, or concerning the delimitation of its frontiers.

The responsibility for opinions expressed in signed articles, studies and other contributions rests solely with their authors, and publication does not constitute an endorsement by the International Labour Office of the opinions expressed in them.

Reference to names of firms and commercial products and processes does not imply their endorsement by the International Labour Office, and any failure to mention a particular firm, commercial product or process is not a sign of disapproval.

ILO publications and electronic products can be obtained through major booksellers or ILO local offices in many countries, or direct from ILO Publications, International Labour Office, CH-1211 Geneva 22, Switzerland. Catalogues or lists of new publications are available free of charge from the above address, or by email: pubvente@ilo.org

I. Introduction

After months of severe contraction, global economic activity has, in the second half of 2009, gradually returned to growth in major emerging markets and in a number of advanced economies. A combination of more stable financial market conditions, significant macroeconomic stimulus measures, improved consumer spending, resumption of industrial production and world trade seems to be contributing to the recovery from the global economic downturn.

Nonetheless, these changes have hardly been translated into jobs. Conditions in the labour market continued to deteriorate across most activities of the economy in the third and fourth quarters of 2009, albeit at a slower pace. Employment declined even in sectors where the effects of the crisis were not immediate such as public services. The repercussions of unprecedented fiscal deficits and government debt levels, as well as some measures to reduce public expenditure may further affect labour market conditions in 2010.

The information contained in this report provides elements for understanding further the causes behind these trends. It expands the previous statistical update (June 2009), to the third quarter of 2009, as part of a continuing effort between the Sectoral Activities Department and the ILO Department of Statistics to assist ILO's constituents with reliable and actualized information for monitoring recent and short term changes in a number of labour market indicators at the sector-specific level, both in developing and developed economies.

It is intended to continue to provide this type of information on a quarterly basis in 2010, as the global economic recovery evolves and data are released by official national sources.

Elizabeth Tinoco
Director,
Sectoral Activities Department

II. Methodological notes

This report was prepared with information available to the ILO in February 2010. The data gathered correspond to a total of 56 countries, of which 30 are developed economies, and 26 emerging and developing countries. This sample represents 85% of the countries that produce monthly or quarterly labour force surveys worldwide. However, given the gap in data from large developing countries, in particular China and India; the aggregate figures should be interpreted with caution.

The data were collected from National Labour Force Surveys and official estimates of each country. Data for EU countries were collected from EUROSTAT. Data are based on national definitions and have not been adjusted or altered by the ILO in any way. The information presented in the report has been obtained, as far as possible, from identical sources.

The selection and definition of economic activities follows the UN International Standard Industrial Classification of all Economic Activities (ISIC) Revision 3. The data presented herein cover major divisions or categories of economic activity only.

The labour market indicators included in the report have been selected for their ability to reflect recent and short term changes both in employment and working conditions. These mainly are: employment (total and/or paid), average hours of work, and average wages.

Total employment covers all status groups, that is, not only employees (wage earners and salaried employees), including paid family workers, but also employers, own-account workers, members of producers' cooperatives, contributing family workers and workers not classifiable by status. The data generally relate to employment during a specified brief period, either one week or one day. Usually, no distinction is made between persons employed full time and those working less than full time.

Paid employment relates solely to employees (wage earners and salaried employees) in employment. Data on paid employment may in some cases have different worker coverage. This report presents data collected for total employment in countries where this information is available. Data for the United States represents paid employment.

Employment data included in this report is also displayed according to regional breakdowns and disaggregated by sex, where the information is available. Of the 56 countries included in the sample, 47 report data disaggregated by sex.

Hours of work is defined as any period of time spent by persons in the performance of activities which contribute to the production of goods and services within the general production boundary. Statistics of hours of work usually show the average number of hours of work per week, or in some cases per day or month.

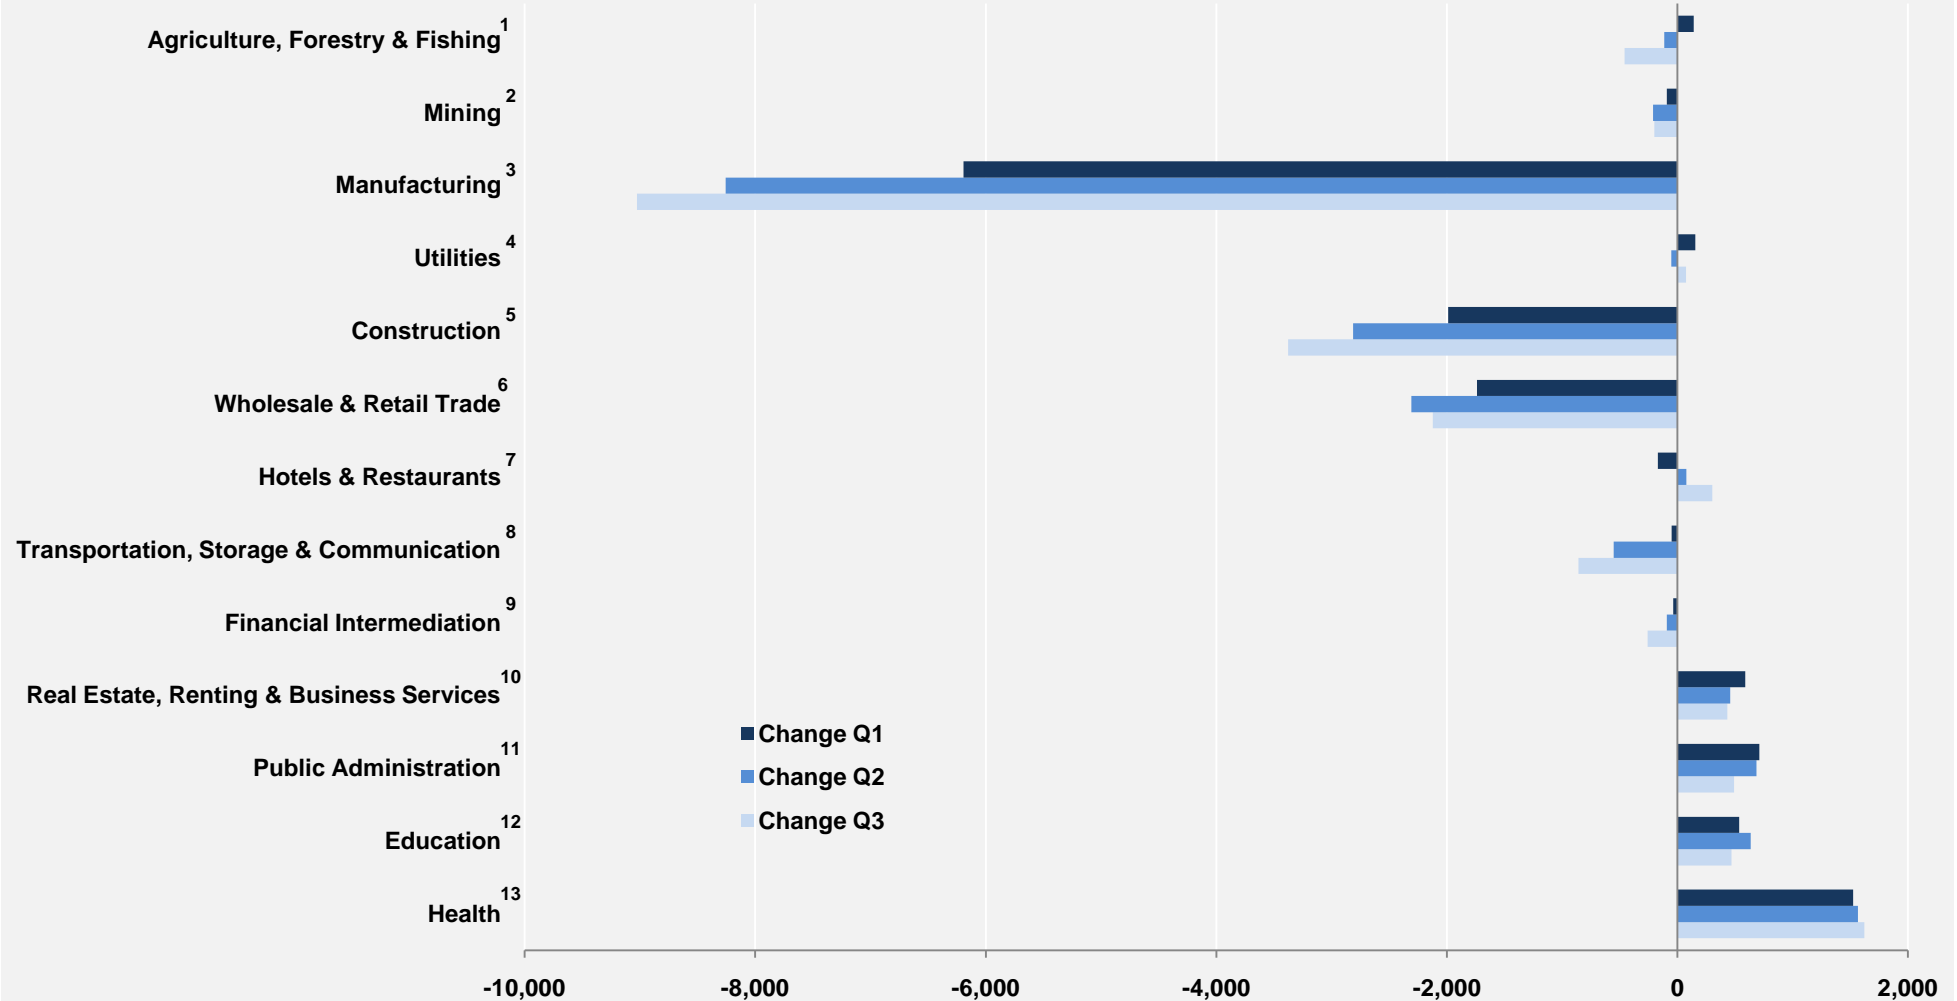

For this report the data provided corresponds to the average number of hours of work per week, as reported by countries.

The data on **wages** usually relate to average gross money wages per wage earner expressed as average earnings. It covers cash payments received from employers (before deduction of taxes and social security contributions payable by workers), such as remuneration for normal working hours, overtime pay, incentive pay, earnings of piece-workers; remuneration for time not worked (annual vacation, public holidays, sick leave and other paid leave); bonuses and gratuities. It should be noted that figures on wages do not reflect workers' disposable or net earnings, since they generally represent gross wages, before deductions such as those for taxes or social security contributions.

The report presents data on monthly or weekly wages, as reported by countries and is expressed in national currency.

III. Employment Trends by Economic Activities
