These estimates are the product of UNAIDS. They have been shared with national AIDS programmes for review and comment, but are not necessarily the official estimates used by national governments. The certainty surrounding any one estimate depends on the reliability of the data available to determine it; therefore ranges, called 'plausibility bounds,' are presented, around the estimates: The wider the bound surrounding the estimate, the greater the uncertainty. The extent of uncertainty depends mainly on the type of epidemic; on the quality, coverage and consistency of a country's surveillance system; and, in generalized epidemics, on whether or not a population-based survey with HIV testing was conducted. A full description of the methods used to develop plausibility bounds can be found in Sexually Transmitted Infections, vol. 86, suppl. 2, 2010.

**Note:** Maps are stylized and not to scale. They do not reflect a position on the part of UNICEF on the legal status of any country or territory or the delimitation of any frontiers. The dotted line represents approximately the Line of Control in Jammu and Kashmir agreed upon by India and Pakistan. The final status of Jammu and Kashmir has not yet been agreed upon by the Parties.
